11. Conclusion

1. Introduction

1.1 Purpose

This document describes the Software Requirements Specification (SRS) for Provider Hub, a web-based service marketplace platform.
It defines the functional and non-functional requirements of the system and serves as a reference for development and evaluation.

1.2 Scope

Provider Hub is designed to connect customers with verified local service providers such as:

- Electricians
- Plumbers
- Tutors
- Cleaners
- Mechanics
- IT Support

The system will allow users to search, book, and review services through a centralized and structured platform.

1.3 Definitions

- Customer: A user who searches and books services.
- Provider: A service provider offering services.
- Admin: System administrator managing users and services.
- Booking: A service request made by a customer.
- JWT: JSON Web Token used for authentication.

---

2. Overall Description

2.1 Product Perspective

Provider Hub is a standalone web application developed using Go (Golang) and MySQL.
It follows a client-server architecture where:

Frontend → Backend (Go + Gin) → MySQL Database

2.2 Product Functions

The system will:

- Allow user registration and login
- Enable service searching by category
- Allow booking of service providers
- Enable provider verification
- Allow rating and reviews
- Provide admin monitoring and reporting

2.3 User Classes and Characteristics

User Type	Description
Customer	Searches and books services
Provider	Offers services and manages bookings
Admin	Manages users, services, and system

---

3. System Features

3.1 Customer Module

The system shall allow customers to:

- Register and log in
- Search services by category

- View provider profiles
- Book services
- Provide ratings and reviews
- View booking history

3.2 Provider Module

The system shall allow providers to:

- Register and create profile
- Add service details
- Accept or reject booking requests
- Update availability status
- View earnings summary

3.3 Admin Module

The system shall allow admin to:

- Manage users and providers
- Verify provider accounts
- Manage service categories
- Generate reports
- Suspend or deactivate accounts

---

4. External Interface Requirements

4.1 User Interface

- Responsive web interface
- Simple and user-friendly design
- Accessible via desktop and mobile browsers

4.2 Hardware Requirements

- Standard computer or smartphone
- Internet connection

4.3 Software Requirements

- Web browser (Chrome, Firefox, Edge)
- MySQL Database Server

---

5. Non-Functional Requirements

- Secure authentication system (JWT)
- Fast response time
- Data privacy protection
- Scalability for future expansion
- High system reliability
- Maintainability

---

6. System Design Overview

Actors:

- Customer
- Service Provider
- Admin

Database Entities:

- Users
- Providers
- Services
- Bookings
- Reviews

- Payments

The database will be relational and implemented using MySQL.

---

7. Development Methodology

The project will follow the Agile Software Development Model.

Reasons:

- Incremental development
- Flexibility for requirement changes
- Continuous testing and feedback
- Faster module delivery

---

8. Technology Stack

Frontend:

- HTML5
- CSS3
- Bootstrap
- JavaScript

Backend:

- Go (Golang)
- Gin Framework

Database:

- MySQL

Other Tools:

- REST API Architecture
- JWT Authentication
- Git

- Postman

---

9. Work Plan / Timeline

Phase	Duration
Requirement Analysis	1 Week
System Design	2 Weeks
Development	4 Weeks
Testing	2 Weeks
Deployment	1 Week

---

10. Expected Outcome

After successful completion:

- Customers will easily find reliable service providers
- Booking process will be secure and efficient
- Service quality will improve through ratings
- Admin will have full monitoring control
- The platform will provide a reliable marketplace environment

---

11. Conclusion

Provider Hub is designed to create a structured and secure service marketplace platform.
It applies core software engineering principles including system design, database management, and Agile development methodology.

This SRS document defines the requirements for Version 1.0 of the system.
